STOCK MANAGEMENT SYSTEM

SOFTWARE SPECIFICATIONS

- **OPERATING SYSTEM : Linux / Windows / IOS**
- **ENVIRONMENT : IBM RAD Software**

HARDWARE SPECIFICATIONS

- **PROCESSOR : PENTIUM IV 2.8MHz**
- **RAM : 256 MB SD RAM**
- **MONITOR : 15" COLOR**
- **HARD DISK : 40 GB**
- **FLOPPY DRIVE : 1.44 MB**

STOCK MANAGEMENT SYSTEM

INTRODUCTION:

Stock management software is basically a computer based system which is primarily used for the purpose of tracking inventory levels, sales, deliveries and the orders.

By this process we can effectively oversee the constant flow of the units into and out of a currently existing inventory.

The transparency provided by this software has a big impact on the bottom line of a business. Through accurate tracking of goods, businesses can minimize waste, analyze trends, and make better investment decisions.

DESCRIPTION:

This project which aims to effectively oversee the constant flow of the units into and out of a currently existing inventory. Companies often use inventory management software to reduce their carrying costs. The software is used to track products and parts as they are transported from a vendor to a warehouse, between warehouses, and finally to a retail location or directly to a customer.

The prime function of stock management system is to reduce the cost. Maintenance of balance between inventory. Keeping details of product. Keeping track of the sale of the product and the inventory levels. Keeping the details of consumers. Maintaining a balance between too much and too little inventory. Receiving items into a warehouse or other location. Picking, packing and shipping items.

STOCK MANAGEMENT SYSTEM

from a warehouse. Keeping track of product sales and inventory levels. Cutting down on product obsolescence and spoilage .Avoiding missing out on sales due to out-of-stock situations.

On the other hand, the manufacturers use inventory management software for the purpose of creating orders and the bills of the materials in order to facilitate the manufacturing process.

STOCK MANAGEMENT SYSTEM

Pros and Cons of using Stock Management Software in a business setting

PROS:

- Economization of the costs incurred by the business, increase in efficiency, a systematic organization of the warehouse, update data with the element of data security, insight into the current trends of where the product is stored, its time duration and which suppliers it came from.
- It also prevents idle keep merchandise in the warehouse or excessive amount of a product by repeated unnecessary purchases.
- Enhance productivity and efficiency.
- Your customers will come back for more.
- Organise the warehouse
- Running out of stock
- Theft and missing stock, will not be there
- **Data security**
 - With the aid of restricted user rights, company managers can allow many employees to assist in inventory management. They can grant employees enough information access to receive products, make orders, transfer products and do other tasks without compromising company security. This can speed up the inventory management process and save managers' time.

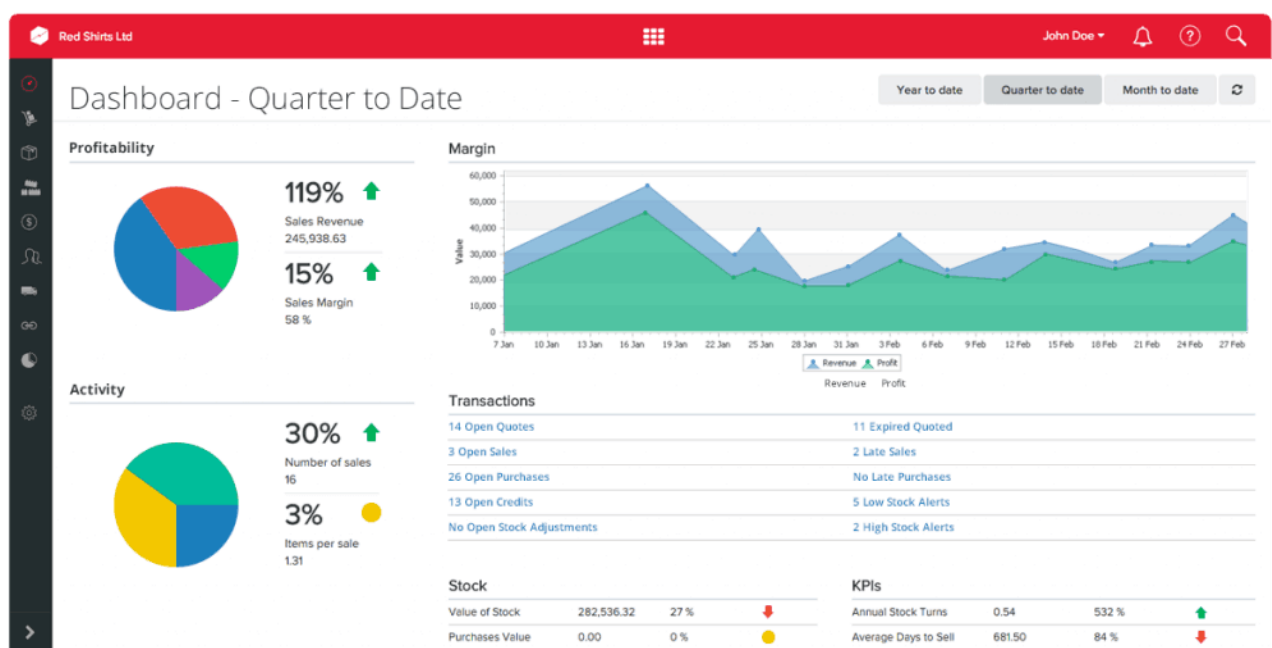

STOCK MANAGEMENT SYSTEM

CONS:

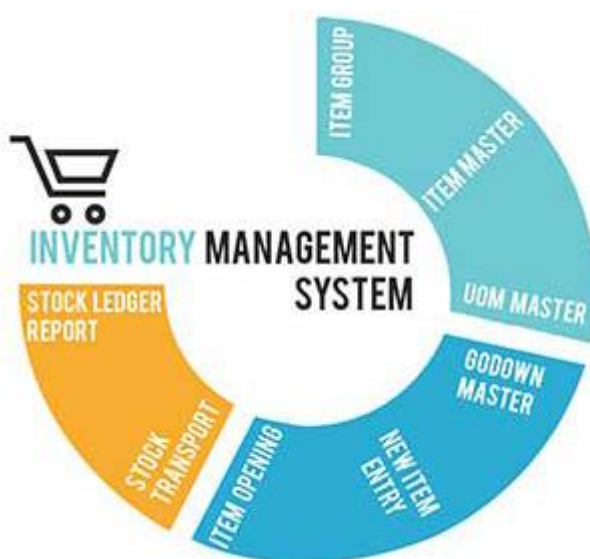

- The main disadvantage of inventory management software lies in its cost and complexity. The expense incurred can be a major drawback because small businesses find it difficult to afford it. Moreover, it is not easy and simple to learn.
- **Expense**
 - Cost can be a major disadvantage of inventory management software. Many large companies use an ERP as inventory management software, but small businesses can find it difficult to afford it. Barcode readers and other hardware can compound this problem by adding even more cost to companies. The advantage of allowing multiple employees to perform inventory management tasks is tempered by the cost of additional barcode readers. Use of smartphones as QR code readers has been a way that smaller companies avoid the high expense of custom hardware for inventory management.
- **Complexity**
 - Inventory management software is not necessarily simple or easy to learn. A company's management team must dedicate a certain amount of time to learning a new system, including both software and hardware, in order to put it to use. Most inventory management software includes training manuals and other information available to users. Despite its apparent complexity, inventory management software offers a degree of stability to

STOCK MANAGEMENT SYSTEM

companies. For example, if an IT employee in charge of the system leaves the company, a replacement can be comparatively inexpensive to train compared to if the company used multiple programs to store inventory data.

STOCK MANAGEMENT SYSTEM

STOCK MANAGEMENT SYSTEM

AIM : To built a software stock management system which can perform the following tasks:-

- Home page
- Product details page
- Products purchased page
- Product sales page
- Purchased report page
- Sales report page
- Consumer details page

PROGRAM:

```
import java.util.Scanner;  
import java.util.Arrays;  
import java.io.*;
```

```
////////////////////////////////////
```

```
class product
```

```
{
```

```

EXPLANATION ABOUT PROJECT:

This project basically has 7 modules:

Home page

Product details page

Products purchased page

Product sales page

Purchased report page

Sales report page

STOCK MANAGEMENT SYSTEM

Consumer details page

OUTPUT:

CONCLUSION:

- This project prevents idle keep merchandise in the warehouse or excessive amount of a product by repeated unnecessary purchases. Enhance productivity and efficiency. Customers will come back for more.
- Manufacturers primarily use inventory management software to create work orders and bills of materials. This facilitates the manufacturing process by helping manufacturers efficiently assemble the tools and parts they need to perform specific tasks. For more complex manufacturing jobs, manufacturers can create multilevel work orders and bills of materials, which have a timeline of processes that need to happen in the proper order to build a final product. Other work orders that can be created using inventory

STOCK MANAGEMENT SYSTEM

management software include reverse work orders and auto work orders. Manufacturers also use inventory management software for tracking assets, receiving new inventory and additional tasks businesses in other industries use it for.
